

# **Sprint 1 Retro:**

## **Project Sprint Planning Notes**

**Team:** Group-P08-07

**Sprint:** 1

**Date:** 10/09/2024

**Attended:** Tony, Vincent, Marko, Thomas and Kenny

**Scrum Master:** Thomas Saleh

**Product Owner:** Jyoti Khundu

**Development team:** Tony, Vincent, Marko, Thomas and Kenny

### **1. Things that went well**

#### **What went well? What the team is happy about?**

Things that went well and what the team is happy about would include being able to successfully implement a docker database for the project and UI layout of each of the components of the website. We also made some functional changes to the website to add more functionality. Alongside such work, we also attend a weekly time to have an out-of-class scrum meeting being Wednesday at 6 pm. We each successfully managed to work on our own branches which led to less merge conflicts overall.

### **2. Things that could have gone better**

#### **What could have gone better? What could the team improve?**

Things the group would have improved on were specifications and planning of our software testing to test our website to make things easier to handle so now we could take more action towards the unit testing for the website functions. We could have implemented a user having to be logged in for all features such as appointment, medical and prescription management when we first started coding instead of after we finished each feature.

### **3. Things that Surprise us**

#### **What wasn't expected?**

The setup of the database was confusing to us as we were unable to recognise which database to use. We ended up using docker for our database structure to help store data on our website.

### **4. Lessons Learned**

#### **What did you learn from the above points?**

In general, the majority of the issue was due to a lack of understanding of unit testing and database for the milestone/project as well as organizational skills. In sprint 2, we hope to double check all our work to make sure it fits all the necessary criteria. We hope

to develop a functional and well thought out website for pet care health and information and finalize all our work where needed.

5. **Final Thoughts**

**Things to keep. Things to Change**

We need to keep on making unit tests and adding data to our database to reach our deadlines before the milestone is over. We would like to conduct more meetings and with more preparation so that we can improve on any aspects of the assignment.
